

MC20A

ALTA™ HIGH FLOW THERMAL MASS FLOW CONTROLLERS

The all-digital ALTA Mass Flow Controllers (MFC) include technology improvements in functionality and performance to help users in semiconductor and high purity thin-film applications increase tool throughput and reduce overall system costs. To increase overall system throughput, the ALTA MFC features fast gas settling times to meet the productivity demands of next generation process tools. To facilitate better chamber matching, the ALTA features improved accuracy to 1% of set point.

Cost savings to users are seen through several innovative enhancements. To reduce the number of MFCs in inventory, users can recall specific MFC gas calibrations and flow ranges from up to 20 stored gas tables, configuring the ALTA MFC right off the shelf. The ALTA represents MKS's ongoing dedication to helping customers increase productivity while reducing system costs.

Features & Benefits

Increases Throughput and Performance

- Reduces process cycle times due to fast gas settling times
- Enables better chamber matching through increased MFC accuracy
- Increases tool uptime through reduction on "No Problem Found" MFC replacements
 - DeviceNet[™] versions include embedded diagnostics software that allows users to check MFC functionality without removing the unit

Reduces Overall Costs

- Reduces MFC inventory through multi-gas, multi-range capability
- Reduces gas panel size due to smallest footprint for high flow MFCs
- DeviceNet configuration significantly reduces MFC cabling
- Open standard DeviceNet protocol provides accessibility to key MFC functions, including flow totalizer and selected trip points

Where Technology Meets Production

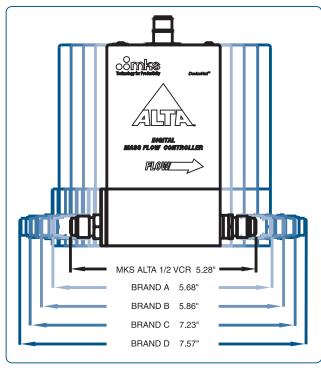

As a technology leader in MFCs, the ALTA represents what users want most – cost effective, easy to use technology and innovation that meets their production needs.

To enable ease of integration into next generation or existing process tools, a variety of mechanical connections are offered. Coupled with its compact size, the ALTA MFC provides an ideal way to migrate from existing analog MFCs, where reducing MFC inventory and improving process repeatability are important.

To ensure that customers can easily use the ALTA MFC, the ALTA gas tables can be configured electronically by the customer to meet specific application requirements. DeviceNet™ configurations are performed through the DeviceNet protocols. On analog I/O versions, gas tables are modified through a separate port using an MKS interface installed on a laptop computer.

Our award winning manufacturing facility is well versed in producing high quality MFCs to meet the demands of critical ultra-high purity applications. ALTA MFCs are manufactured in our Class 100 cleanroom in accordance with ISO 9001 procedures. With short lead times to meet your ever changing delivery schedules, the ALTA MFC meets business requirements as well as technical specifications.

Size, compatibility, cleanliness, and reliability make the ALTA MC20A an ideal choice for more demanding high flow control applications such as silicon epitaxy, RTP, diffusion/oxidation and MOCVD.

Smallest footprint high flow MFC
